CanRemember Crack Activator

Macros are made for BBcode. To make a macro, you write the URL of the BBcode can remember with a BBcode tag that you insert manually in your post, like : [canremember text] Once you have done that, click on the icon next to "can remember" that will appear in your toolbar. To edit your macro, click on "edit current macro" And your text will be set automatically by your macro. You can create new macros: click on "create new macro" You can save them in an "XML" format file, for easy and fast recovery of the text snippets. To do that, click on the button next to "XML" in the right, and select the "save" button. You can now recover your macro in just one click, from your file. If you want, you can save your macros in an "XML" format file, to get easy and fast recover your macro when you do not have internet access. Change the URL. You can change the URL of the can remember macro by clicking on the "edit current macro" button. You can modify the "URL" of your macro, to set it up for your forum, in the forum where you will use it. You can create a new macro: click on "create new macro". You can also add new BBcodes to it, using your keyboard. If you want to remove a BBcode, it is a simple click on the icon, "X", for the BBcode you want to delete. If you want to use multiple macros, it is easy, you just have to create a new macro and repeat all the steps described above. Setting an HTML tag. For text snippets you want to show, you have the possibility to create a unique HTML tag, in the macro, and to add a simple BBcode, in the macro, for the text you want to set as a link. You can create a new macro:

click on "create new macro". Then, you have the possibility to edit your macro, and add a BBcode. If you want to edit the macro, just click on the "edit current macro" button, and you can edit all of your macro. To add a new HTML tag, you have to write the opening and closing tags in your macro. To close the tag you want to write, you can either use the tag "" 81e310abbf

CanRemember Crack With Serial Key (Latest)

CanRemember is designed to add, store, edit and delete text snippets, ready to copy and paste on forums, with BBcode already prepared. You can save time using CanRemember, when you have to regularly post similar things, using a premade canvas, in order to modify and adapt your answer. Thus, most of your texts will be already written and configured. The product is composed by two main components: 1) The possibility to add, store, edit and delete text snippets, ready to copy and paste on forums, with BBcode already prepared. 2) CanRemember Banner. It's a premade tool, with the possibility to modify and adapt it, in order to fit with your needs. You can add up to ten different backgrounds (with different colors and shapes). You can adapt CanRemember: You can modify the space allocated for the text snippets, by moving the Thumbnailer box. You can adapt the width of the text snippets (and the Divider line between the snippets), by modifying the Divider line Width in the Divider line Width section. You can replace the image for the background (the rectangle is the part of the image that will appear in the selected background). This product is suitable for beginners, as well as for professionals. For those who have never used AEM, for example. As a professional, you are used to the use of AEM. You are already used to the use of the forums, and to the use of BBcode. This may be your first time, or not. When you are new to AEM, you have to adapt quickly to the new style. It's the difference between using a VCR with a remote control, or using a DVD player. The use of a premade tool, like CanRemember, is like having a remote control or a DVD player, ready to use. If you use CanRemember, you will not be limited to the BBcode you are used to. You will be able to use AEM forums, but you will be able to use them with CanRemember. You will be able to change the font you are used to, use an alternative text, add an image, insert pictures, have a clean background, and more. You will be able to post short answers, in a few seconds, without needing to post the same thing over and over again.

What's New in the CanRemember?

===== You can easily add code snippets in your texts using this plugin. With it, you can easily set your text in a way it is compatible with the forum's character limits, whatever the forum's BBcode is. The snippet you can add will be automatically translated in the forum's BBcode. This will allow to keep your text ready to be directly used in the forum. You can easily modify your snippets' text at any time. And you can also remove them from your text, or delete them completely. Features: ===== * Add/Remove snippets on your texts * Pre-configure your snippets * Easily translate your snippets * Easily save and edit your snippets * Easy and clean configuration * Easily configuring your snippets * Automatically adding the BBcode when you edit your snippet * Automatic translation of your snippets * Easy way to find your snippets * Support for the forums' default configuration, as well as all the forums' BBcode * Supports all the characters you can find in a forum * Support for more than one snippet per forum (if it's allowed) * Support for images, and auto linking to an external site (if it's allowed) Requires: ===== * PHP 5.3.0 or higher * MySQL 4.0 or higher * Zend Framework 1.11.11 or higher * Zend Framework UI 1.11.11 or higher * DOM PDF 1.0.6 or higher * json_encode 1.3.3 or higher * JsRoutes 1.0.1 or higher * stringy 1.0.4 or higher Installation: ===== * Zip your files in a folder, and upload the folder on your server. For a full installation of the plugin, you should upload the folder located in your plugins/CCI directory * Upload the file, ccip.php, on your server in the folder plugins/CCI/ccip.php Usage: ===== * Insert your snippets at any time. For example, in a new topic \$snippet = new ccip_snippet('text of your snippet'); \$snippet->save(); * To edit your snippet, click on the name of your snippet in the table. * You can also click on the edit button, then click on the name of the snippet. * To remove a snippet, select the row, and click on the remove button * You can create a new snippet, or import from your code editor. If the forum does not allow for importing snippets from your code editor, you can use the import button. * You can also create a new forum when editing your snippet. * If you want to link to an external site, use the link button, and put the link of the
